

Year 5 Easter Project

Choose **one** of the three projects to complete over the holidays.

North America

Research a country in North America and compare it to your home country.

What are the similarities and what are the differences?

What is unique about this country?

This can be presented how you wish:
PowerPoint, poster, non-chronological
report, fact file.

Challenge – how many of these keywords
can you include? Biome, mountains, rivers,
forest, climate zones, vegetation belts,
volcanoes, earthquakes and water cycle.

Moving Toys

Research the history of moving toys.
How do they move? When were they
first introduced? How have they
changed over the years?

Try to create a simple moving toy
with the different materials you
might find at home.

Creative Creator - Create a new species of animal.

An example has been provided.

Phase 1: Describe the Animal

During this phase, you will explain your animal's habitats and describe how it meets its 5 basic needs.

Phase 2: Describe the Adaptations

During this phase, you will describe the adaptations that your animal needs in order to survive.

Phase 3: Present your Animal

During this phase, you will create a 3D model of your animal (in art) and an online poster that presents your animal to the rest of the class or present a documentary on your animal and share it.

Feel free to send what you've done for a chance to see it in the newsletter and for your teachers and Gordon friends to see!

Remember to read for at least 10 minutes daily and continue to practice your times tables!
